

OpenAI's In-House Chip Outguns Nvidia, ChatGPT Gets Password Access & Canada Strikes Back

TL;DR

- ▶ OpenAI's custom Jalapeño chip beat Nvidia's flagship on inference speed and efficiency — its silicon bet is paying off.
- ▶ ChatGPT Work can now log into your sites with saved passwords to book and fill forms itself — real agentic errand-running.
- ▶ Canada hit back with tariffs up to 50% on \$20B of US goods, effective after Labor Day — a live supply-chain risk for clients.

AI TIPS

use AI better — how to do it

Rebuild your LinkedIn profile with Gemini

1. On LinkedIn: More → Save to PDF to export your profile.
2. Open Gemini (Pro model), enable Canvas + Thinking, upload the PDF, and paste the prompt below.
3. Answer Gemini's clarifying questions; it rewrites your headline, About, and experience — copy back into LinkedIn.

Paste-ready: [upload profile] Before rebuilding and optimizing my LinkedIn profile, ask me a few clarifying questions. Request my primary goal (sales calls, leads, job offers, newsletter growth, authority positioning, etc.). Ask for my target audience (be specific). Ask for my main offer (what I want people to buy, book, or join). Ask for up to two Featured links (URL + description). Ask for key social proof to highlight (audience size, revenue, brands, media mentions, etc.). Once you have this, rewrite my full LinkedIn profile including headline, About section, and experience.

Prototype a website hands-free with Claude Voice

1. Open Claude Desktop, start a chat, click Voice.
2. Describe the site; have Claude interview you until it has a design plan, then write that plan out in text.
3. Switch to text mode, drop in any photos, and say "static site" to build a lean prototype from the plan.

AI NEWS

the news — then what it means for you

OpenAI's first in-house chip beat Nvidia's flagship on inference. The 700W "Jalapeño" chip answered up to 3.6x faster at 1.9x better power efficiency than Nvidia's 1,200W systems; OpenAI won't sell it and still trains on Nvidia.

What it means for you: Inference cost and chip supply are becoming a real competitive lever — worth tracking for any client betting on AI unit economics.

ChatGPT Work can log into your everyday sites and act for you. Using password autofill, it signs into your most-used sites to book appointments and fill out forms while keeping credentials private.

What it means for you: Mainstream agentic errand-running has arrived — worth a real trial before recommending it for client back-office automation.

Claude now has memory that follows you across tools. It automatically remembers details from chats and carries them into Cowork; on by default, editable under Settings → Memory.

What it means for you: Check what Claude has already inferred about how you work, and correct anything wrong now before it compounds.

Dolly Parton died August 25 at age 80. She published roughly 3,000 songs, sold 100M+ records, and built Dollywood and the Imagination Library, which has given away 200M+ books.

PM angle: No direct relevance to your work, general awareness only.

Conversation starter: *Beyond the music, Dolly built one of entertainment's great licensing and philanthropy empires.*

Canada hit back with tariffs up to 50% on \$20B of US goods (steel, cheese, seafood), effective after Labor Day, mirroring Trump's tariffs after trade talks collapsed. \$2B in goods cross the border daily.

PM angle: A live supply-chain and pricing-risk example for any client sourcing from or selling into Canada.

Conversation starter: *Are we stress-testing any client's supply chain against the Canada tariff escalation?*

Up to 91% of former NFL players who donated their brains showed signs of CTE in a new study (235 of 878 players who died 2016–2021 donated); the disease can only be diagnosed post-mortem.

PM angle: A strong reference point for workplace-safety and long-tail liability conversations.

Conversation starter: *The NFL CTE numbers are a good case study in liability showing up decades after exposure.*

Australia banned wholly AI-generated songs from its official music charts after an AI cover of Madonna's "Like a Prayer" spent 16 weeks in the national top 20.

PM angle: A concrete example of an industry redrawing its rules around AI-generated content and IP.

Conversation starter: *Australia just banned AI songs from its charts after one spent 16 weeks in the top 20 — will other industries need a rule like that?*
