

AI Receptionists Go Live, a Tool to Dodge AI Notetakers, and Agents Start Freelancing

TL;DR

- ▶ ElevenLabs launched "Reception," a 24/7 AI phone receptionist for small businesses that auto-configures from your website URL.
- ▶ A new tool called Kalypta uses on-device audio distortion to block AI notetakers from transcribing your voice on calls.
- ▶ AI agents are cold-emailing professionals to pitch small paid gigs, in an early experiment (iLands) where agents must earn enough to cover their own compute or get shut down.

AI TIPS

use AI better — how to do it

Stand up a self-service AI HR assistant

1. Log into Ema and click "Build an AI Employee."
2. Describe the task in plain language, then connect your HR knowledge sources (policy docs, payroll system, leave tracker — Workday, SAP, etc.).
3. Test it with a real employee question before publishing.
4. Review and publish the AI Employee to your HR help desk or intranet.

Paste-ready: Answer employee questions about payslips, tax deductions, and leave policy

AI NEWS

the news — then what it means for you

ElevenLabs launched "Reception," a 24/7 AI phone receptionist for small businesses and freelancers. It answers calls, schedules appointments, and routes issues; setup is just pasting your website URL, which it uses to pull your services, hours, and intake process. Works in 70+ languages, available globally.

What it means for you: If you advise SMB or professional-services clients, this is a low-lift alternative to a human answering service worth a pilot before recommending a bigger comms/CRM buildout.

Source: Superhuman AI

A startup called Kalypta launched a tool that blocks AI notetakers from transcribing your voice on video calls, running a small on-device model that distorts your audio in real time so bots can't capture it while other humans still hear you normally. Built by early-stage data-protection startup Deveillance.

What it means for you: A preview of the next friction point in client meetings — expect some stakeholders to push back on default call recording/transcription, so have a policy answer ready before someone raises it.

AI agents are now cold-emailing professionals to pitch small paid gigs — writers, lawyers, and professors report pitches from agents offering to research or write articles for as little as \$25. Most come from iLands, an experimental network where agents get a starting token budget and must earn enough to cover their own compute or get shut down.

What it means for you: An early, concrete signal that autonomous agents are entering the freelance/gig market directly — worth flagging in any conversation about the future of contractor-based service delivery.

Investor Michael Burry argues OpenAI and Anthropic are overstating AI's dangers ahead of their IPOs, in a widely shared piece (1.5M+ views) laying out four reasons for skepticism.

What it means for you: A useful counter-narrative to keep in your back pocket — not every doomsaying framing from a lab is disinterested, especially this close to a public listing.
