

Anthropic Exposes Global Claude Misuse as OpenAI Courts Wall Street

TL;DR

- ▶ Anthropic's new threat report discloses bioweapons-research attempts blocked on Claude and accuses Chinese labs of mass-distilling it via fraudulent accounts.
- ▶ OpenAI launched ChatGPT for Financial Services, while Visa, Mastercard, and Ant International moved to verify AI agents making payments.
- ▶ Oil topped \$100/barrel and US wholesale prices jumped 5.4% year-over-year, rattling markets ahead of next week's Fed meeting.

AI TIPS

use AI better — how to do it

Set up a recurring ChatGPT Work project for repeat tasks

1. Create a local folder with a two-digit prefix for the project.
2. In ChatGPT desktop: New chat > Work > Choose project > New project, name it, and select that folder.
3. Tell ChatGPT about the project and ask it to propose a structure (e.g. turning meeting notes into action items and weekly plans), then feed it your input documents once.
4. Once it's processed correctly, ask it to turn the workflow into three scheduled automations, then into callable "skills" triggered by a slash command.

Turn your AI corrections into a personal benchmark

1. Pick one recurring task and save the original prompt plus source files.
2. Review the first output and turn each correction into one yes-or-no check, like "one idea per slide."
3. Grade the output yourself, then have AI grade the same checklist without seeing your scores.
4. Tighten any check where you disagree, then rerun the same test across models.

AI NEWS

the news — then what it means for you

Anthropic discloses global Claude misuse, accuses Chinese labs of mass-distillation. A 150+ page threat report details 8 months of disrupted misuse, including 5 bioweapons-research cases (no intent asserted), a Yemen actor building rocket-guidance software, and a consultant surveilling 25M Mali phone lines. Separately, Anthropic named seven Chinese labs (Alibaba, DeepSeek, Moonshot, Xiaomi, and others) running thousands of fraudulent accounts to distill Claude's outputs, with Moonshot and DeepSeek allegedly reselling Claude responses as their own.

What it means for you: A live case study for any client conversation on AI governance, model-provenance risk, or vendor competitive dynamics.

Visa, Mastercard, and Ant International back AI-agent payment verification. The three launched a joint effort to identify and verify AI agents making purchases on a user's behalf.

What it means for you: Foundational infrastructure for agentic commerce — worth tracking if any client roadmap touches AI checkout or agent-initiated transactions.

The US marks 25 years since 9/11. Ceremonies were held at the Pentagon, the NYC ground zero memorial, and Shanksville for the nearly 3,000 killed; NYC's mayor also released 170,000 pages of documents suggesting officials knew the post-attack air was toxic while telling the public otherwise.

PM angle: No direct relevance to your work, general awareness only.

Conversation starter: *Hard to believe it's been 25 years — did your team do anything to mark it today?*

Oil tops \$100/barrel and inflation data pushes rates higher. US wholesale (PPI) prices rose 5.4% year-over-year in August, the 30-year mortgage rate topped 7% for the first time since May 2025, and the ECB hiked its deposit rate to 2.5% on surging energy costs — all ahead of next week's Fed meeting.

PM angle: A live data point for any client budget conversation banking on rate relief this quarter — borrowing costs are still climbing, not falling.

Conversation starter: *Are we still modeling a rate cut this quarter, or should we build the plan around costs staying elevated?*

Houthi rebels seize the Yemeni port city of Mokha. The Iran-backed group's advance risks a return to full civil war after the 2022 ceasefire, adding to Red Sea shipping-route tension.

PM angle: Worth flagging to any client with Red Sea-dependent shipping or logistics exposure.

Conversation starter: *Anyone tracking Red Sea shipping costs — is this Yemen news already showing up in freight rates?*
